

REDD+ Pilots and Landscape Approach

Herry Purnomo

- *Scientist at CIFOR*
- *Professor at Bogor Agricultural University*

Forest Carbon Partnership Facility & Indonesia Ministry of Forestry

June 2-4, 2014 Jakarta, Indonesia

Structure

REDD+ Pilots

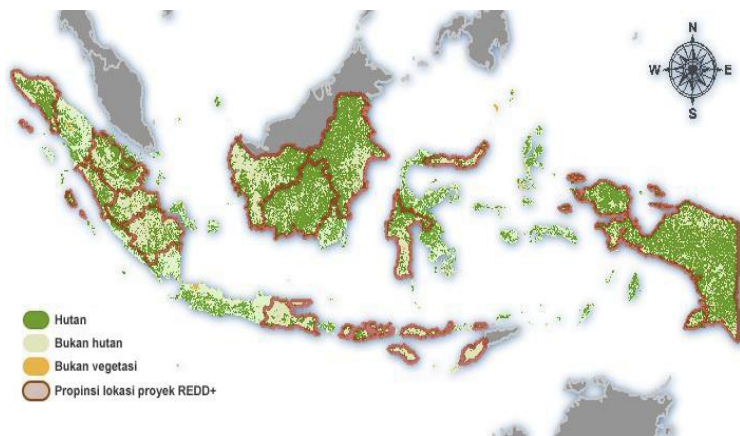

Why, what and how is
Landscape Approach?

When we do it

OVERVIEW REDD+ PILOTS

- Indonesia on 25 Sept 2009 committed to reduce emission by 26% and 41% (without and with international assistance) by 2020 compared to BAU.
- REDD+ Pilot (*Percontohan*) is to show **HOW** REDD+ can be implemented.

- Indonesia has
 - 2 pilots: Central Kalimantan (in collaboration with Norway) and Central Sulawesi (with UN REDD Indonesia).
 - 36 REDD+ demonstration activities

http://www.redd-indonesia.org/index.php?option=com_content&view=article&id=205&Itemid=57

Central Kalimantan

- 15 million hectares of land, 70 % forested, peatland, economic growth.
- Facing unsustainable expansion of the agriculture and mining sectors.
- Activities: Logging limit, re-forestation, mining permit re-arrangement
- Progressing, but the same challenges remain

http://www.norway.or.id/Norway_in_Indonesia/Environment/Mission-to-Observe-REDD-Achievements-in-Central-Kalimantan/

Central Sulawesi

- 4.4 million hectares forest cover: 64% of total land area.
- Unjust policies legalized forest concessions, oil palm plantations and mining companies (3.7 million ha)
- Activities
 - Establishment of REDD+ working group and REDD+ Strategy
 - REL 14.3 million ton CO2
 - Forest Inventory
 - Priority areas for REDD+ actions
- Land conflict resolution and better governance are progressing

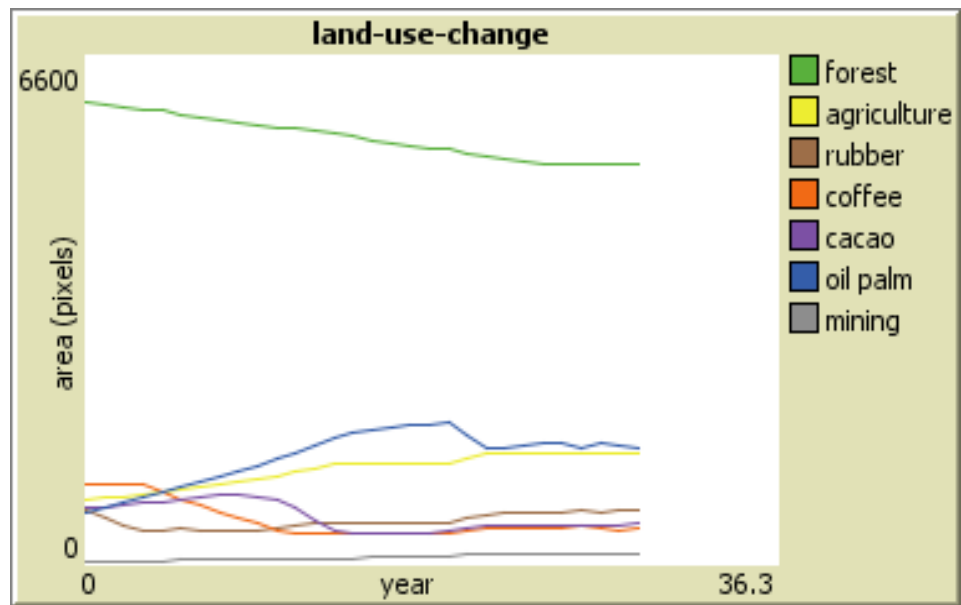

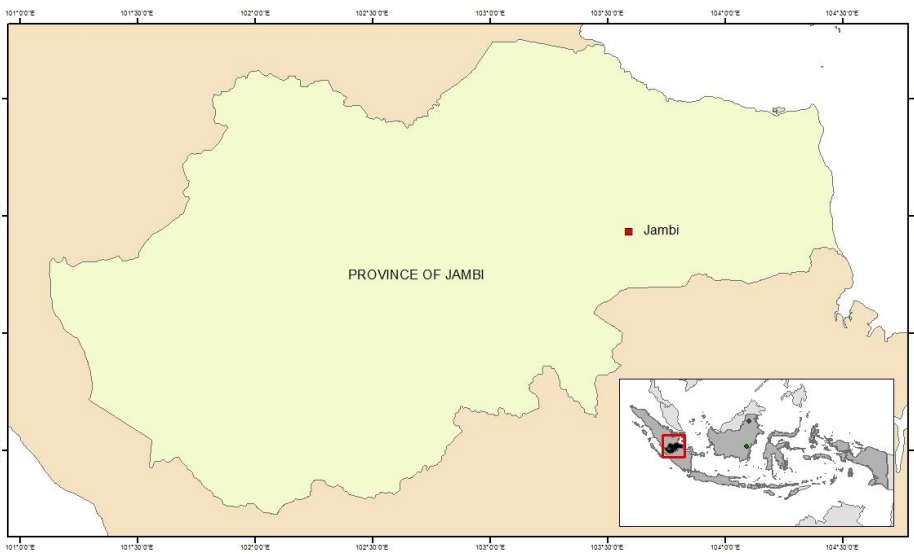

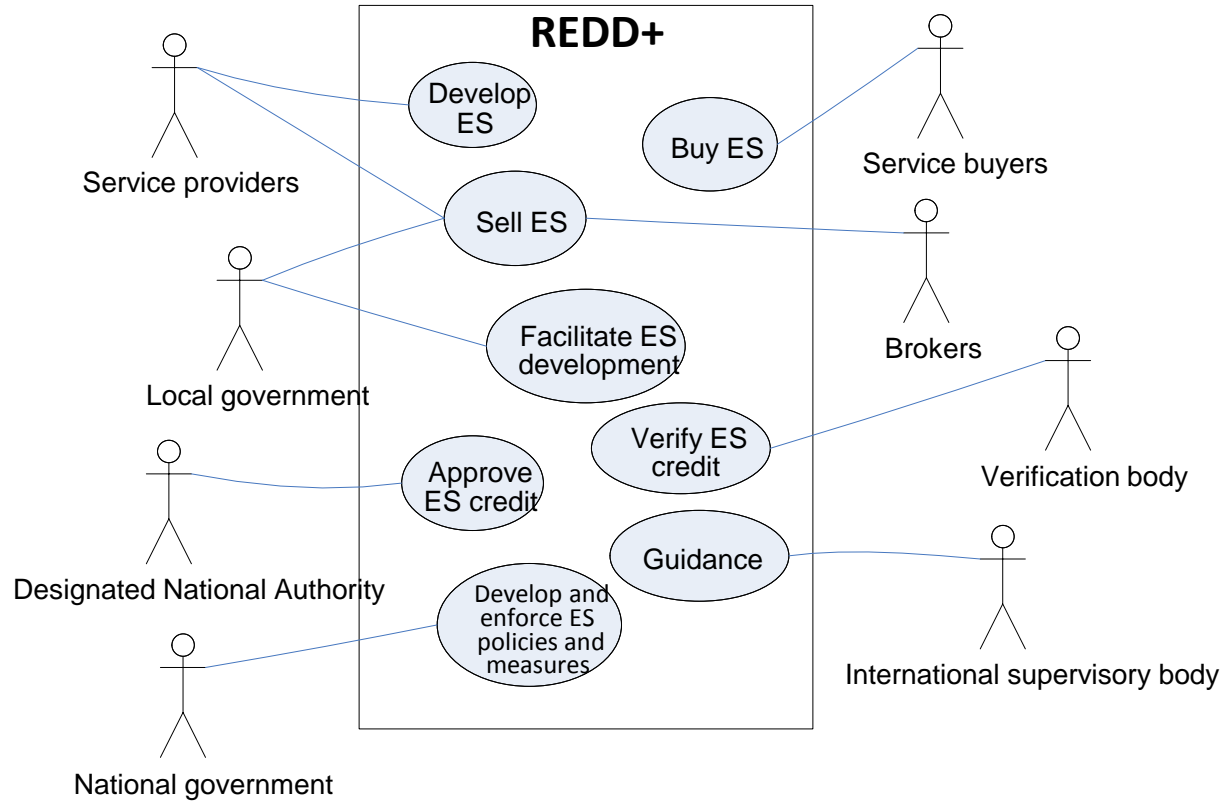

Banowati (2012); FPP (2011)

Purnomo et al. 2012;
2013

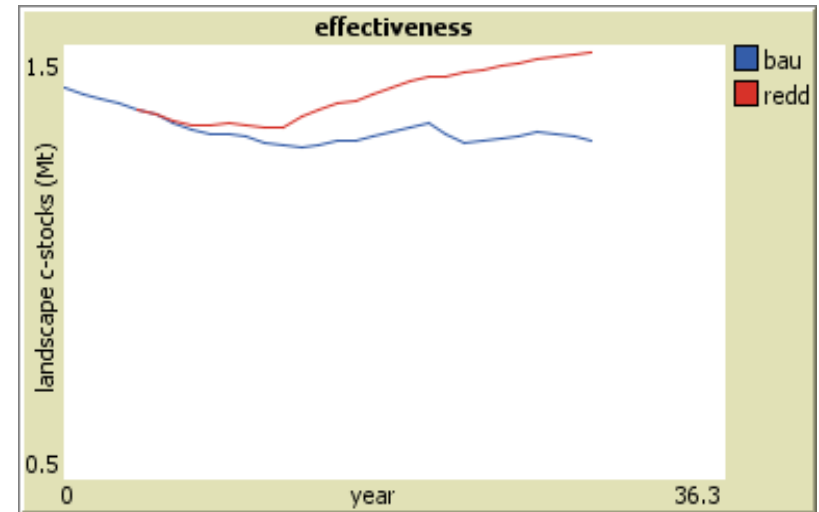

Scenarios

Carbon price at \$15

Carbon price at \$25

Carbon price and altruism

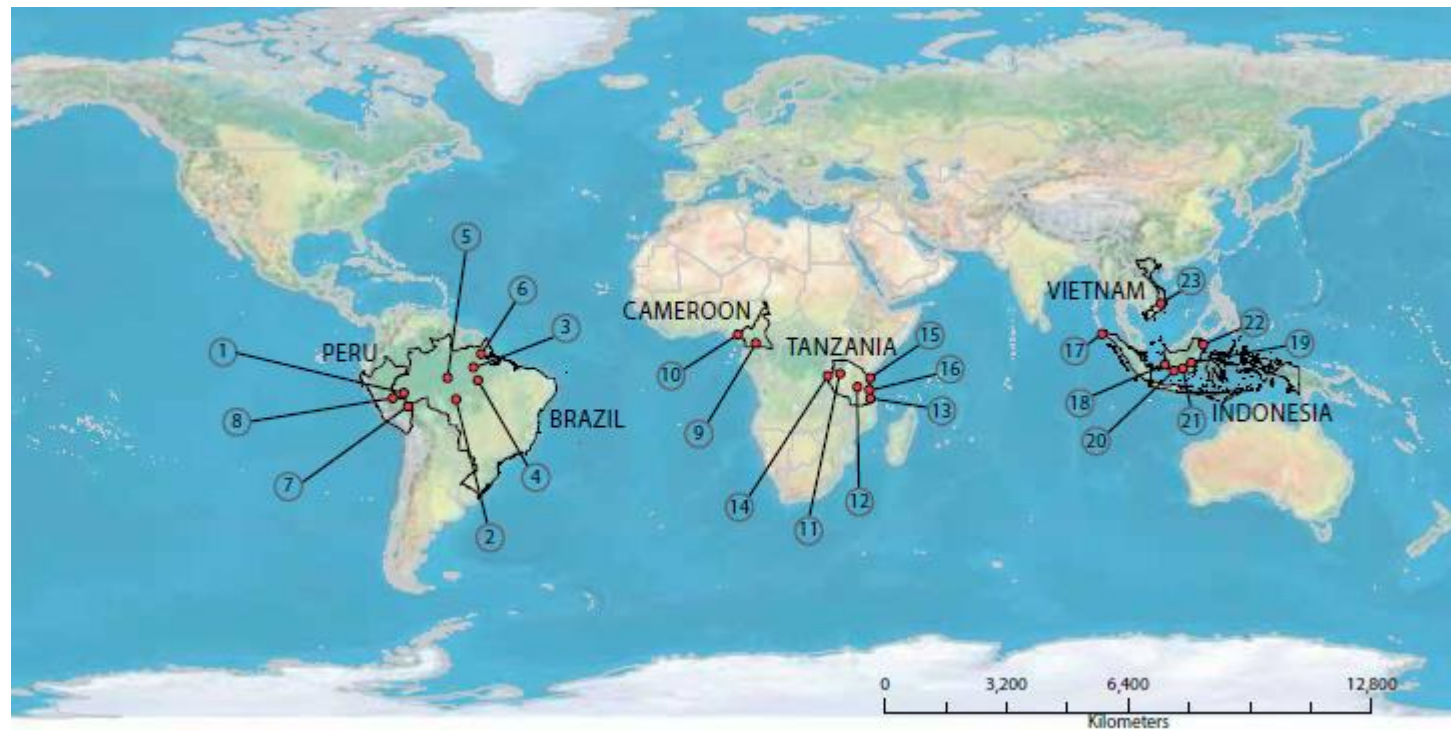

Effectiveness of REDD+ at \$ 15/t carbon price but different social awareness

REDD+ Policy characteristics

	Simplifying factors (A)		Neutral (B)	Complicating factor (C)	
Where did the impetus for the policy come from?		Inside the country		Outside the country	v
		Inside the government	v	Outside the government	
Who decided the policy and how?	v	With democratic legislative process		Without democratic legislative process	
		With widespread participation	v	Without widespread participation	
What is the nature of the benefits and to whom do they accrue?		Visible		Invisible	v
		Immediate		Long term	v
		Dramatic	v	Marginal	
What is the nature of the costs and who bears them		Invisible		Visible	v
		Long term		Immediate	v
		Marginal	v	Dramatic	
How complex are the changes?		Few changes		Many changes	v
		Few decision- makers		Many decision makers	v
		Small departure from current practices, roles, and behaviours		Large departure from current practices, roles and behaviours	v
		Limited discretion		Large discretion	v
		Low technical sophistication		High technical sophistication	v
		Low administrative complexity		High administrative complexity	v
		Geographically concentrated		Geographically dispersed	v
		Normal pace		Urgent/emergency pace	v
		Single event		Permanent changes	v
		Low level of conflict about nature and value of the changes		High level of conflict about nature and value of changes	v
Total number of checks:	1		4		15

Global REDD+ pilots

Insights from 23 subnational initiatives in six countries

- Tenure is a fundamental challenge
- Disadvantageous economics of REDD+
- Other interventions will be the primary means to reduce GHG emissions reduction

Sunderlin *et al.* 2014

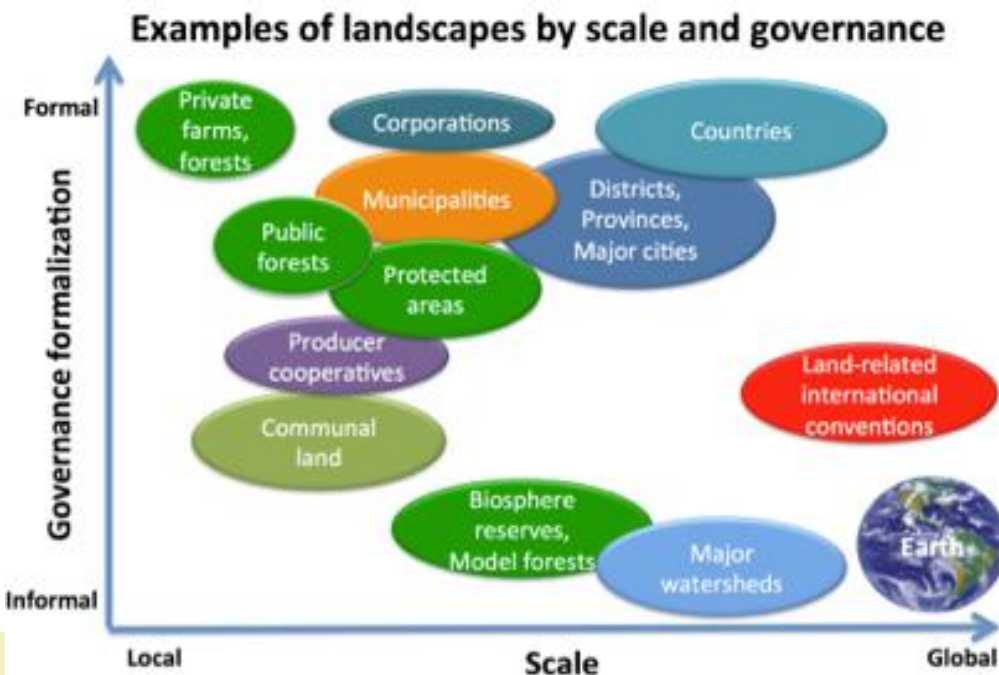

Why Landscape Approach

- REDD+ is working to create financial incentives to curb emissions from deforestation.
- But REDD+ is on landscape
 - Landscape is a place of a complex of interacting ecosystems and humans
 - Multi-actors with multi-interests
 - Governed by institutions
- Single sector approach is hard to work

What is Landscape approach?

- Landscape = “A place with governance in place”
- **A place:** A landscape is a geographical area that can be of any size — from very small to very large.
- **with governance in place:** There exists institution(s) that will consider options for the landscape and set priorities.

- The aim of a landscapes approach is to contribute to sustainable development and support actions to curb climate change.

Holmgren, 2013

President SBY for Rio+20

*The problems are clear,
the solutions are simple,
but are hard to achieve...*

How to do Landscape Approach?

- Defining landscape objective(s)
- Synergizing various interests under that objective(s): REDD+, timber logging, certification, PES, eco-tourism, green economy
- With adaptive collaborative management
 - Learning process
 - Action research (reflection-planning-action-monitoring)
 - Modeling (soft and hard)
- KPH (*Forest Management Unit*) is a place for landscape approach

Forest is my home (BLHD South Kalimantan 2012)

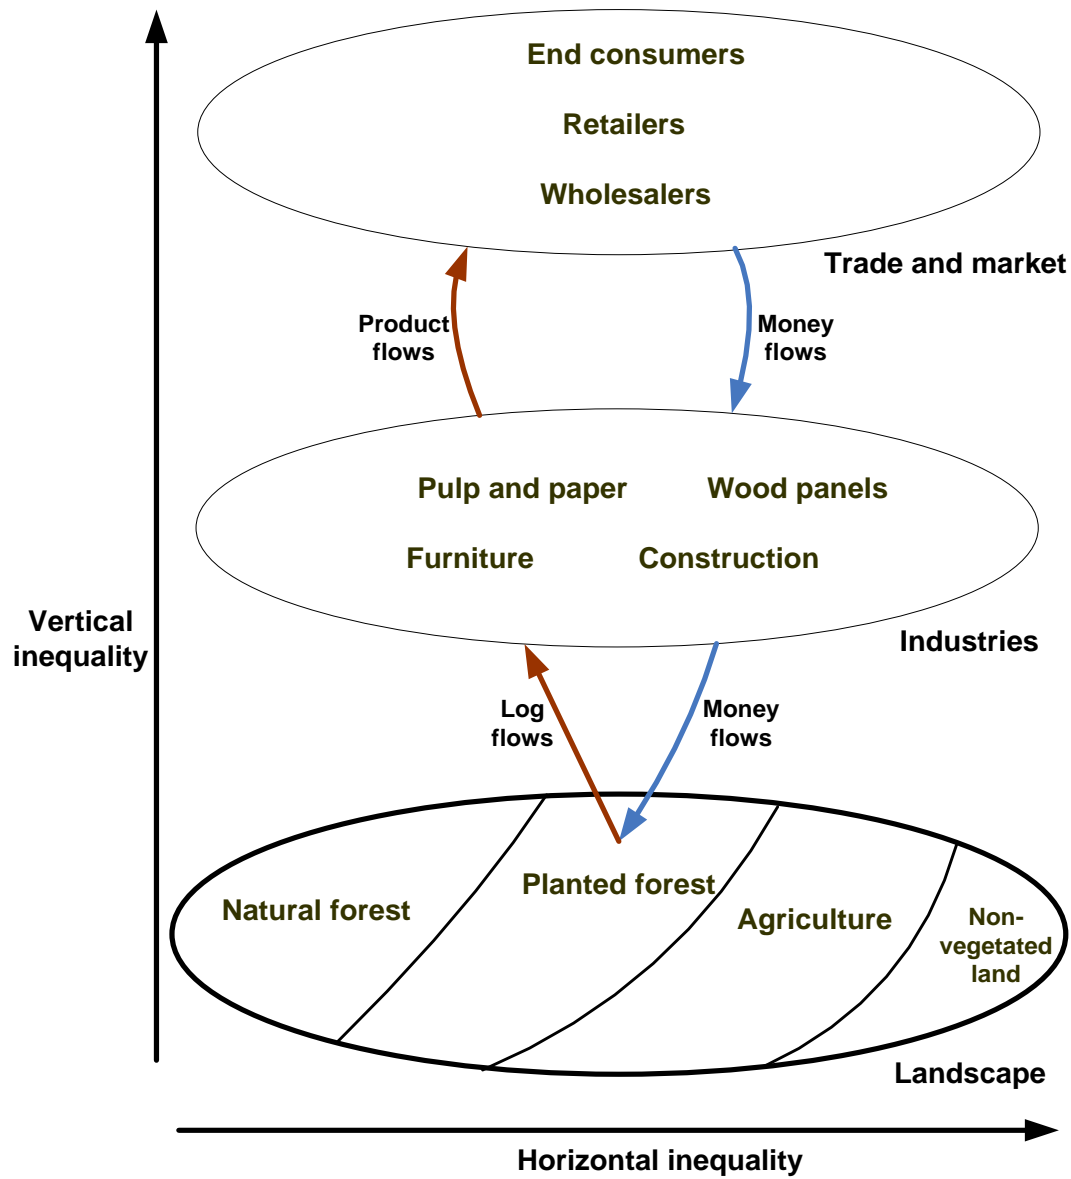

Ten principles for a landscape approach to reconciling agriculture, conservation, and other competing land uses

1. Continual learning and adaptive management
2. Common concern entry point.
3. Multiple scales
4. Multi-functionality
5. Multiple stakeholders
6. Negotiated and transparent change logic
7. Clarification of rights and responsibilities
8. Participatory and user-friendly monitoring
9. Resilience
10. Strengthened stakeholder capacity.

(Sayer *at al.* 2013)

Harnessing Horizontal and vertical inequalities

When we do it

- It is complex
- Long term process
- Needs facilitation
- Building local institution and good governance
- Decentralization has new meaning
- Risks: rent seeking, free riding, corruption...
- It is doable
- Just do it, because it is the only way
